

# FRIENDLY LINK

The merchandise you have ordered is produced in the factory in China, but you have no way of closely monitoring the production process.

Friendly Link Company offers

❖ Quality inspection services of merchandise during the manufacturing stage

The quality inspection will be conducted while the goods are still in the production process.

A professional inspector on behalf of the Friendly Link Company will arrive at the plant equipped with exact technical specifications of the product and a physical sample.

The inspector will sample products from the production line based on the pre-determined criteria established by the customer such as the functioning of the product, components, colors, weight and more.

Already during the inspection the client will be able to be updated as to the results and receive immediate warning if quality defects or other undesired findings are discovered, which will facilitate the interruption of production.

This quality inspection assures maintaining high standards, save unnecessary expenses and prevents the distress associated with receiving an inferior product.

**The sensible way to do business in a global environment**
